SEMINAR PRESENTATION

Friday, October 11, 2019

2:30 PM

Carnegie Hall 113

So, what do I do with my degree?

Chris Kendrick (BCS, '92)

Abstract: As you embark on a career in Information Technology, it is a challenge to understand what the market is looking for and where your degree may take you. As a “cloud of resources”, Bell professional Services are required to proactively adapt to the demands of the market and, as such, is at the pulse of what organizations are looking for to supplement the capacity and skills of their teams. Through the lens of a recent public procurement for resources, Chris Kendrick ('92) will guide the audience through the various roles that are being asked for; explain what the role entails; and offer his professional and personal insight on the employment prospects through a natural story-telling approach.

About the Presenter: **Chris Kendrick (BCS, '92)** has been in the IT industry for over 30 years, starting an Acadia co-op student in the summer of 1988. In this career, his degree at Acadia has enabled him to do a wide variety of roles for many industries in Canada, United States, and Australia. Chris is a former president of CIPS Nova Scotia serving on the National Board, a long-standing member of the Jodrey School of Computer Science Advisory Committee and is currently employed as a Professional Services Solutions Specialist with Bell Canada based out of Halifax, Nova Scotia. Outside of work, Chris is actively involved in the local music and sport community and lives in Falmouth, Nova Scotia with his wife

Natalie and son Elijah.

Everyone is welcome to attend
